

# Student Interns

“This experience will significantly help shape how students and future scientists see medicine and science because they will be directly engaged in projects.”

Camille Bell, '22  
Keck Graduate Institute

“This internship was amazing and super helpful in my biochemistry career path.”

Anush Salaniwal, '22  
Scripps Ranch High School

“This internship is a good experience to learn and be better at your professional career.”

Joselyn De Jesus Gonzalez, '22  
Ponce Health Sciences University

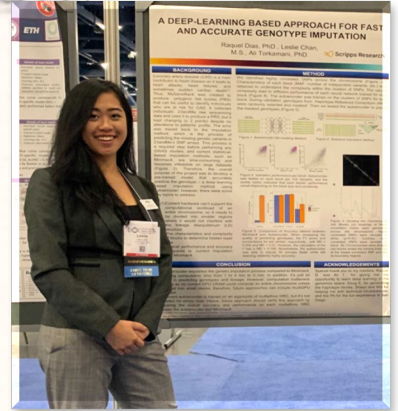

“After joining the Scripps Internship, I was exposed to a breadth of knowledge thanks to the mentorship of my lab and my mentor, Joshua Levy - a PhD with background in Systems Biology. As a data science student, this new perspective gave me a look into how data and biology work to understand the systems underlying virus mutation and epidemiological patterns which spread diseases.”

Alexis Ambriz, '22  
UCSD

# Student Interns

“ The internship allowed me to be passionate about a project, which pushed me to acquire new skills and hone it in. The tasks could be difficult, but I owe it to my mentor and coworkers who made it a great environment to experiment and feel safe to make errors. It allowed me to know what I want personally in a workplace, what type of work I enjoy most, and the types of people that would allow me to thrive and foster. ”

2019 ASHG conference

Leslie Chan, '19 & '20  
*Keck Graduate Institute (KGI)*

“ I really enjoyed working with my mentor on her projects, collaborating with fellow interns on journal club and primary literature, and I was able to learn more about palliative medicine which was new to me. Plus, there the social aspect of spending time with other interns also under the Scripps umbrella. ”

Reonna Smith, '18  
*Meharry Medical College*

“ SRTI Internship provided an excellent opportunity to further develop my academic interests, working in a professional environment, and personal development. ”

Eric Song, '21  
*UCSD*
